

LED strip 335(4008) SMD 60LED/m

Wide applicability, easy to install and maintain, long lifespan.

Very flexible, easily be curved to any shape.

Various colors available.

Extremely luminous, with wide viewing angle.

Energy saving and environmental conservation.

Applications

Indoor decoration lighting

Large scale backlight

Window display lighting

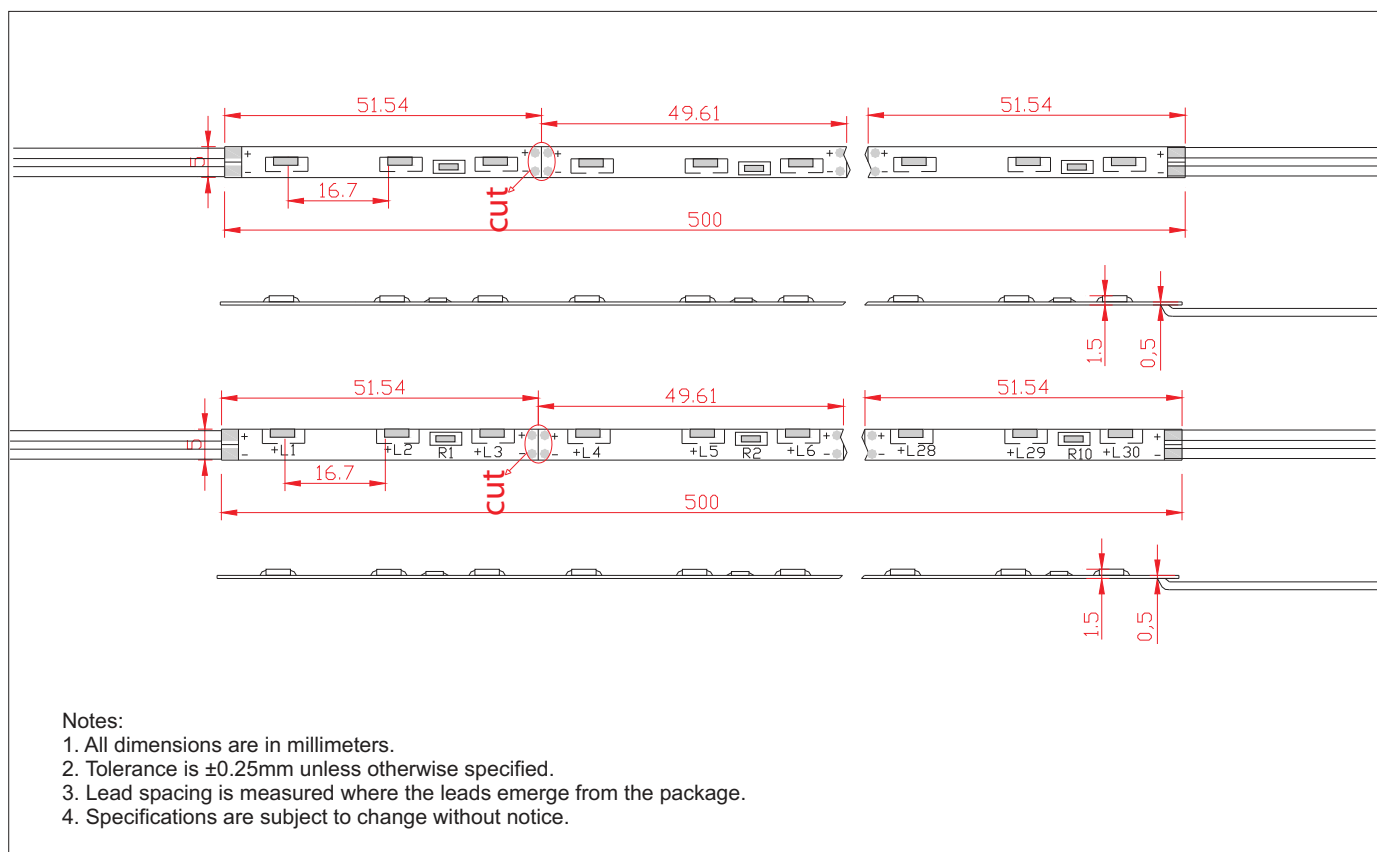

Building contour decorative lighting

Advertising signs

Caution

- Linear separable LED strip on flexible printed circuit board with self-adhesive back.
- Each unit of 3 LEDs can be cut out as a regular segment without damaging the rest ribbon.
- brand LED package, 3 years guarantee
- Better brightness, longer lifespan

LED strip 335(4008) SMD 60LED/m

Electrical / Optical Characteristics

Color	Operating Voltage	Wattage (W)	LED quantity / m	Length	Correlated Color Temp. (K)	Luminous Flux (lm/m)
warm white	12V	4.8	60	5m	2700 - 3000 K	N/A
natural white	12V	4.8	60	5m	4000 - 4500 K	N/A
cool white	12V	4.8	60	5m	5900 - 6500 K	N/A
red	12V	4.8	60	5m	-	N/A
green	12V	4.8	60	5m	-	N/A
blue	12V	4.8	60	5m	-	N/A
yellow	12V	4.8	60	5m	-	N/A

Note:

Prohibit to use this product in excess of the operating voltage (DC12V) 5%.

Non-waterproof products, and the working environment humidity is less than 60%.

Don't add reverse voltage at both ends of the product.

No weights extrusion, excessive meander.

Life span is 50000h.

Standard length: 5 meters/reel

Ribbon width: single color 5mm

Printed circuit board thickness: single color 0.25mm

LED strip 335(4008) SMD 60LED/m

Assembly information

Solder connection should only be performed on designated solder pads (marked "+/-"). During soldering, don't exceed the maximum soldering time of 10 seconds and the maximum soldering temperature of 260 Celsius degrees.

The smallest unit (3LEDS) can be removed by cutting with scissors between the designated solder pads.

The mounting of the ribbon is facilitated by means of the double-sided adhesive on the back-surface of the ribbon. Care must be taken to provide a clean and dry mounting surface, free of oils or silicone coatings as well as dirt particles. The mounting substrate must have sufficient structural integrity. Take care to completely remove the adhesive backing. Once the ribbon is appropriately positioned, Press on the ribbon with about 20N/cm² (refer to application techniques of 3M adhesive transfer tapes).

The minimum bending radius is 1cm. The ribbon may be bent over a smaller radius of the circuit board contain no Electronic components and such bends should be made once and fixed in position to avoid cyclic fatigue.

Safety information

The SMD light ribbon itself and all its components may not be mechanically stressed.

Assembly must not damage or destroy conducting paths on the circuit board.

Installation of LED modules (with power supplies) needs to be made with regard to all applicable electrical and safety standards. Only qualified personnel should be allowed to perform installations.

Correct electrical polarity needs to be observed, Wrong polarity may destroy the ribbon.

Parallel connection is highly recommended as safe electrical operation mode, Serial connection is not recommended. Unbalanced voltage drop can cause hazardous overload and damage the ribbon.

Please ensure that the power supply is of adapter power to operate the total load.

When mounting on metallic or otherwise conductive surfaces, there needs to be an electrical isolation points between ribbon and the mounting surface.

Pay attention to standard ESD precautions when installing the ribbon.

Damaged by corrosion will not be honored as a materials defect claim, it is the user's responsibility to provide suitable protection against corrosive agents such as moisture and condensation and other harmful elements.
